Address
31/19A,Thakkiya Road,Thalapitiya, Galle

PROFILE

An accomplished Mechatronic professional with over 4 years of comprehensive expertise in software, firmware, and IoT product development specifically designed for enhancing agricultural operations. A perceptive individual with a proven track record in planning, defining, developing, prototyping, and testing complex electro-mechanical systems and subsystems specifically tailored for agricultural applications.Proficient in scripting languages, data analysis, troubleshooting, and Root Cause Analysis (RCA), I bring a keen analytical mindset to problem-solving. I possess extensive knowledge in the field of Robotics, having actively participated in Robot battle competitions and demonstrating proficiency in the ROS (Robot Operating System) environment.

SKILLS

- CAD Design- Auto cad, Solid Works
- Programming Skills- Python, Embedded C and Javascript programming
- Machine Learning and Deep learning
- Data science - Data collection and reporting on test results.
- App development -Flutter Framwork
- Knowledge in industrial robotics
- Experience with Linux OS.
- Project Management- Microsoft project
- Soldering SMD and SMT
- Web development- HTML,CSS & Javascript
- Ability to read electrical schematics.

PROFESSIONAL EXPERIENCE

MECHATRONICS ENGINEER

DEC 2021 - PRESENT

Honest greens (PVT) ltd

Highly motivated Mechatronics and Embedded Systems Engineer with over 4 years of experience in electro-mechanical product development, automation, and new product industrialization. Skilled in PCB design, process optimization, and system integration, with a strong background in IoT and automation technologies. Proven success in leading product design from concept to production, ensuring manufacturability, cost efficiency, and operator safety. Experienced in working with cross-functional engineering teams, ERP systems, and process automation tools to drive continuous improvement and manufacturing excellence.

- Project Lead: Developed fully automated SMART container farm using hydroponic technology.
- Experience in Micro controllers and development boards(nodemcu,esp32,raspberry pi) .
- Design and Develop Automatic Climate control system Connect through API (Air conditioning and CO2) .
- Experienced in SMD/SMT PCB design and validation using KiCad.
- Hands-on experience in prototyping, testing, and troubleshooting embedded systems.
- Experience in designing mechanical parts and assemblies, as well as creating detailed drawings for manufacturing.
- Develop and prototype new IoT solutions. My knowledge of programming, sensors, and actuators to create IoT devices allows me to design and build complex systems that can communicate with each other through the internet.
- Conduct product presentation, demonstration to board of directors.
- Possess strong skills in data analysis enables me to collect and analyze data from these units and proficient in using various software tools such as Python and Excel.
- Extensive experience working with PLC systems.

MECHATRONICS ENGINEER

APR 2019 - MAR 2020

Techneed (PVT) ltd

Techneed is an IOT company that mainly provides Smart Home and IOT services. Techneed offers services worldwide and has offices in several countries.

- Developed various IOT projects using Arduino for Techneed, a Smart Home and IOT services company
- Utilized AWS Cloud Service for efficient data management and storage
- Designed PCBs using Eagle software for seamless integration of electronic components
- Conducted CAD/CAM works using Solid Works for 3D modeling and prototyping
- Installed Home Automation Systems for clients to enhance their living spaces.The automation systems included features such as smart lighting, temperature control, security systems, and entertainment systems.

TRAINEE MECHATRONICS ENGINEER
K&K (PVT) ltd

JUNE 2017 - JAN 2018

- CNC Machine Operation: Proficient in operating CNC machines for precision manufacturing and fabrication.
- Instrument Handling: Skilled in handling various instruments for scientific experiments and research.
- Repair Welding Machines and Power Tools: Experienced in repairing welding machines and power tools to ensure their optimal functionality.

AWARDS AND PROJECTS

- Participate Uva Wellassa University Robot battle(2018 & 2019)
- Data Science Professional Certificates IBM.
- Developed GAS Cylinder Measuring Tool.
- Developed a Face recognition system.
- Cooler Truck monitoring system.
- Developed object detection using tensorflow.
- Seed counter
- Cocopeat Filler

EDUCATION

UNIVERSITY OF VOCATIONAL TECHNOLOGY
Bachelor Technology in Mechatronics
